6 Photoshop Features That Are Just As Important As An Apple Macbook Pro 6 Photoshop Features That Are Just As Important As An Apple Macbook Pro If you're in the market to purchase a new computer and decide between an Apple Macbook Pro and a computer made by a different manufacturer, then you may want to consider what you can get out of Photoshop instead of thinking of the hardware. After all, it's not only Apple that makes the best laptops available. All manufacturers make awesome machines that are really good at Photoshop. But if it comes to deciding between an Macbook Pro and a Windows-based computer, there are some powerful Photoshop features that Mac users can take advantage of, but that Windows users can't. Let's look at a few examples, and then list the Photoshop features that Windows users just can't use. Quick Selection Tool Quick Selection Tool One of the most useful features for beginners is the Quick Selection tool, also known as the Magic Wand. In fact, the Magic Wand is what makes the magic happen. With this tool, you can quickly select parts of an image simply by clicking on them. It will select all the pixels that fall within a certain area. If you don't have any other selection tools active and click on an area of the image, it will select that area automatically. Quick Selection Tool This tool can get you through large images quickly, or even select areas that may be too small for other selection tools. If you need more control over your selections, you'll need to use the Lasso tool instead. Paint Bucket Paint Bucket After you've used the Magic Wand to select areas of your image, it's very helpful to go back to that area and use the Rectangular Selection tool. This tool allows you to make a selection based on its contents, which is really useful when you need to alter a portion of the image but don't want to select all of it. For example, if you can't figure out what you're trying to re-do with an area of the image, you can select that area using the Magic Wand and then use the Rectangular Selection tool to create a new selection around the area of interest. Layer Masks Layer Masks One of the most used tools for modifying and manipulating images is the layer mask. This tool enables you to see

Association of host genetic polymorphisms with susceptibility to severe pulmonary aspergillosis in cancer patients. To find out the role of host genetic polymorphisms in predisposition to developing severe pulmonary aspergillosis (SPA) in cancer patients. Cancer patients who developed SPA in a cancer hospital in Chennai during the period of 2002-2003 were included for the study. A comparison group of cancer patients who did not develop SPA was selected. After confirming that the two groups were matched for age, sex, year and type of cancer, host single-nucleotide polymorphism studies were conducted in the patients using the differential primer extension PCR. In addition, the role of host genetic polymorphism in susceptibility to SPA was investigated in two stages. First, the effect of single nucleotide polymorphism on the baseline susceptibility to SPA was studied. Of the three SNPs tested, one (rs11826414) showed significant association with susceptibility to SPA, while the others did not. Secondly, haplotype analysis was used to compare the distribution of haplotypes between the two groups. We found a significant association between a haplotype formed by a G/G mutation at the position of 14253 (14253G > A), rs2234158 (14189T > C) and rs11722270 (14671T > C) and SPA. Overall, our results suggest that host genetic polymorphisms are important factors in determining the susceptibility to SPA in cancer patients.

Q: How to customize Haskell's cake/example folders? I want to customize the cake/example folder contents so that I can use it as a starting point for my own example files. Any ideas how? A: When I create new Haskell projects, I put the example files under src/CakeTut and src/Bakery. Some example files used in the docs can also be found in hs/Docs. Before I write a blog post describing the file structure, I'll confirm with the documentation team whether it's ok to just copy it into the new project.

Q: Highcharts does not display custom chart with datetime I want to display a line chart with one datetime column. If I specify a time axis, it displays the line chart with the time when each point is taken. Instead if I use a datetime axis, I do not get a chart with the time, but just the date when each point is taken
